TS Citizen Developer - Basic
Course Description

Purpose
In this course you will learn how to design and deploy solutions using TS No-code Platform. During the course participants will become familiar with the platform Backend (the "Designer") and will work on different types of front-end applications. During the course each participant will build their own application based on a chosen business use case scenario.

Learning objectives
After the training the participants will have achieved the following knowledge, skills and competencies:

Knowledge
• Will know how to work with datamodels and flowmodels
• Will be introduced to the concept of relational datamodels and will understand the difference between logical and physical entities
• Will become familiar with TS Data Type Conponents
• Will know the difference between State- and Stage-models

Skills
• Can edit and create add-ons to existing TS applications
• Can build a basic application (entity) from scratch
• Setup validation and dependencies in datamodels
• Restrict access by defining permissions for users and groups
• Work with the most common Data Types Components
• Be able to design a basic workflow:
  • Create stages
  • Create action types (auto-notifications)

Competencies
Upon completion of this course, participants will be able to design and deploy basic applications, based on a best practice approach. Participants will be able to modify existing applications running on TS No-code Platform.

Course Outline
• Module 1: TS Designer
• Module 2: Making changes
• Module 3: Building my first Entity
• Module 4: Datamodel
• Module 5: Relations
• Module 6: Workflow
• Module 7: User and Group management
• Module 8: Permissions
• Module 9: Design and Best Practices
• Module 10: Build an application

Course Code
PFM300

Training released
April 2020

Audience
Primary: Business Developers, Internal IT, Consultants, Secondary: Developers

Time
Total 1 day of training

Prerequisites
Experience with formulas, macros and autoblocks in MS Excel and Word is an advantage.
